

We're a cutting-edge part-agency, part-digital shop in Brooklyn. We create web and mobile apps, social media strategies, and innovative campaigns for companies we love (Ford, Budweiser, NFL, Disney, and MTV are just a few). We're leading the initiative to make our neighborhood, DUMBO, the Digital District of New York City.

Our founders built an amazing team from the ground up and we're rapidly-growing. We're looking for ridiculously awesome candidates to become the Next Big Carrot and help us take over the world.

We need a Developer/Engineer/Hacker.

## **Requirements**

- Strong understanding of object-oriented programming and MVC paradigms.
- Cross-functional. You should be comfortable with both server-side and client-side work.
- Experience interacting with third-party APIs and web services.
- Demonstrated familiarity and application of open-source tools.
- Competency of PHP or Ruby. We work primarily with PHP and Ruby, so competency is vital—but we do welcome knowledge of other languages as long as you're properly skilled

## **The ideal candidate**

- Knows his or her way around any or all of the following: Git, HTML5, CSS3, jQuery, node.js, AWS, EC2, Unix, MySQL, MongoDB, Wordpress, Buddypress, Zend Framework, Expression Engine, and Code Ignitor.
- Is passionate about all things mobile, web, and social.
- Has Photoshop experience.
- Has existing open-source contributions under his or her belt.
- Will mesh seamlessly with the Carrot team. Culture is a top priority for us. This means you should be amazing... and a little bit insane. A great sense of humor is a plus.
- Is active on social media.

## **Is this you? Prove it.**

Fill out the application at [carrotcreative.com/careers](http://carrotcreative.com/careers). That's it.

But... we do get a lot of applications. Want to stand out from the noise? The Carrot Crew is all over the web. Figure out how to get our attention and tell us why we can't resist you.

(Hint: Boring cover letters not necessary.)
